

Seminal Fluid (Sperm) Collection Post Vasectomy

About your Test

- Your health professional has requested a test to count the number of sperm present in your seminal fluid following a vasectomy.
- You will need to obtain a specimen container and delivery bag from your health professional or from one of our collection centres.
- Please produce your sample at home. Our collection centre rooms are unsuitable for this purpose.

Test Procedure

1. Collect your sample by masturbation without the use of a lubricant - do not use a condom to collect your sample as the spermicidal agent in the condom will affect your test results.
2. Ensure you collect all the seminal fluid produced into the specimen container and screw the lid down firmly.
3. Label the specimen container with your full name, your date of birth, and the date and time of the collection.
4. Place the specimen container in the delivery bag provided, with the form in the front pocket.

Deliver your sample to: **Wellington SCL Laboratory, Wellington Hospital, Level 5, CSB Block (Clinical Services Block).** See map over side.

NOTE: We can only accept samples from Mon – Fri between 8am and 4pm

Alternative delivery options – Phone for sample delivery times deadlines

Courtney Place phone 381 5911, Lower Hutt phone 381 5911 or Porirua phone 237 8600

Reminder: Have you labelled the container?

To get to the CSB lifts follow the **Orange line** past Radiology, take either the lifts or the stairs up one floor to level 3, and the **Purple Lifts** are just past Fuel.

CSB - Clinical Services Block
