Lab: 21-4701738

#### SARS-CoV-2 COVID SEROLOGY

SARS-CoV-2 IgG Ab                      Not Detected

Comment

Validated by SBU, MLSci

#### SARS-CoV-2 IgM COVID SEROLOGY

SARS-CoV-2 IgG + IgM Ab:    Not Detected

This sample was tested by the Roche Diagnostics Elecsys Anti-SARS-CoV-2 total (IgG and IgM) antibody assay.

IgM serology is prone to false positive results from inflammatory states and other infections. This result is provided for the purposes of international travel and should not be regarded as a diagnostic test without clinical interpretation. Negative SARS-CoV-2 IgM results together with negative viral PCR results make acute infection unlikely in an asymptomatic individual.

This test has not been fully evaluated in low risk populations.

Testing laboratory: Wellington SCL, Level 5, CSB, Wellington Hospital, Riddiford Street, Newtown, Wellington, Wellington 6021, New Zealand.

Wellington SCL is an IANZ accredited laboratory.

Validated and authorised by authority of the Clinical Microbiologist, Dr Tim Blackmore.
